

ASAHIIV products used in the spaceship set of the live action movie of "Gintama" in Japan

A large number of Asahi Yukizai's thermoplastic piping products such as valves, pipes, joints and flanges have been used in the set of the spaceship in the movie "Gintama" that will be released on July 14 (Fri).

Most of the piping products were painted, with some even given a metallic look, so they are not immediately recognizable as Asahi Yukizai products. Yet as the photos below indicate, the handles of valves were left untouched in the distinct red color found in Asahi Yukizai products.

The live action movie of "Gintama" is a film adaptation of the serial manga "Gintama" (written and illustrated by Hideaki Sorachi) that features in Shueisha's Weekly Shōnen Jump. The movie version is written and directed by Yūichi Fukuda and stars Shun Oguri, Masaki Suda and Kanna Hashimoto amongst other famous cast members.

Asahi Yukizai is promoting the movie "Gintama" with hopes it will be huge success!
